1. Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues of the university admit eligibility predictor project at the time of the release to User Acceptance Testing (UAT). User Acceptance Testing (UAT) is a type of testing performed by the end user or the client to verify/accept the software system before moving the software application to the production environment. UAT is done in the final phase of testing after functional, integration and system testing is done. The User Acceptance of this product is not surveyed enough to give a solid conclusion. The theoretical and hypothetical acceptance is calculated to be high enough to conclude that this product is usable and valuable.
